

ROCKSOFT

Discover the brand new advanced multi-layered covering for marrying rollers

Bond your product without glue & preserve product thickness

ROCKSOFT

Say goodbye to glue-related challenges and embrace our thickness-preserving bonding solution.

Introducing the revolutionary and brand new multi-layered **ROCKSOFT** roller coating covering, meticulously designed for marring rollers in the tissue industry. With this cutting-edge innovation, you can now operate with a broader nip without compromising the quality or the flattening of the final product.

This breakthrough technology enables effortless bonding of tissue plies using only water, eliminating the need for traditional glue application.

Not only does this innovation deliver substantial cost savings for tissue producers, but it also exemplifies their commitment to environmental consciousness by reducing chemical usage. Experience the future of greener and more efficient tissue production with the advanced **ROCKSOFT** roller coating.

Soft layer : *wider nip,
dampens load variations,
possibility to bond any number of plies*

Intermediate layer : *even load
distribution in the cover, pressure
in the nip*

Hard layer :
*no embossing effect,
preserves thickness &
bulkiness*
